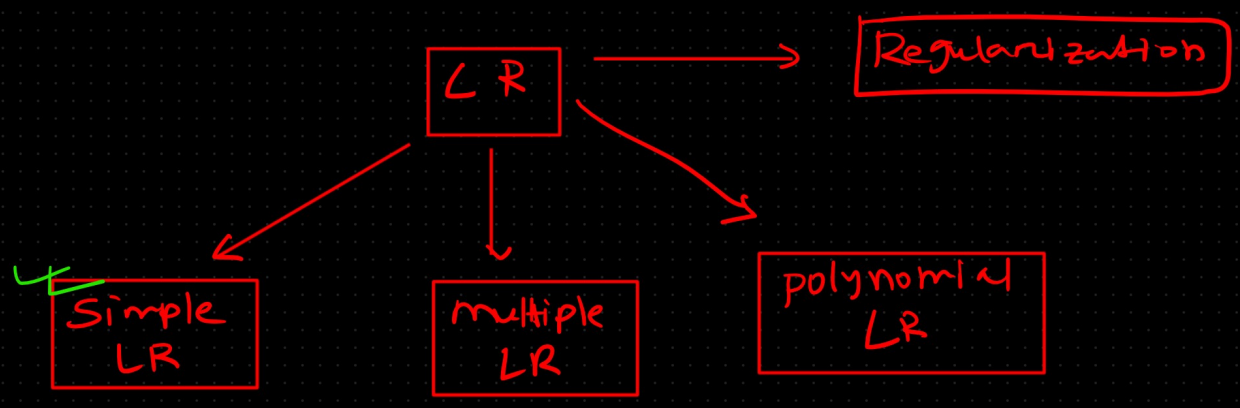
Agenda:

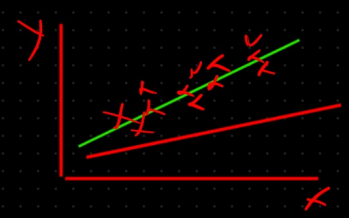
① Simple Linear Regression

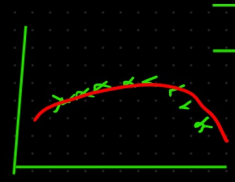
Machine Learning supervised Regression model
↓
Continuous Number

* easy to understand
* It can be used to understand other model



X	Y
CGPA	Package
7.77	4.0
9.55	8.12

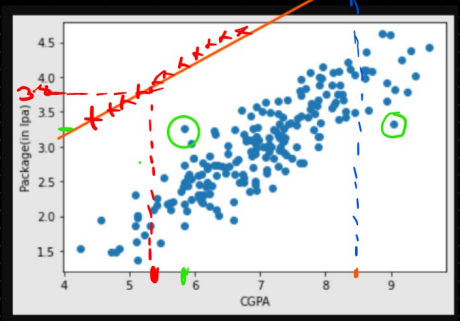


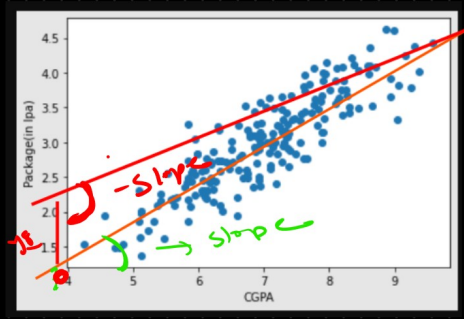


CGPA	Package
5.5	2.5
6.7	3.0
7.7	5.0
9.1	9.5

30.0

5.5





→ best fit line

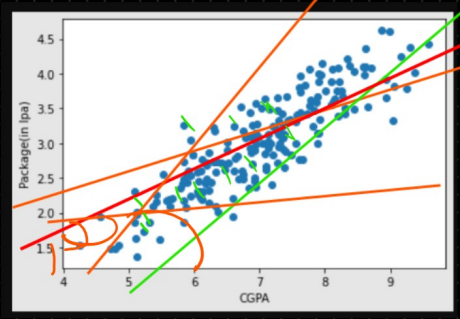
Y

X

$$\boxed{y = mx + b}$$

m → slope

b → y Intercept



Error

best fit

Error = 0

LR → Algorithm → $y = mx + b$

$y = mx + b$

$\text{package} = m \times \text{capa} + b$

bias

0 ← Fraction

10, 12

weight

$= 0.7 \times 0 + 1.2$

$\Rightarrow 1.2$
