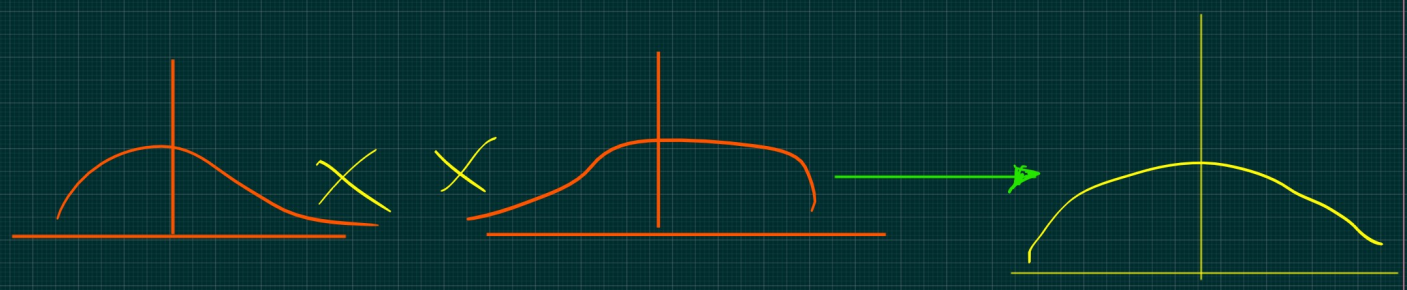
Data Transformation



Linear model — (i) Linear Regression
(ii) Logistic Regression

Transformation

(i) Log Transformation
(ii) Reciprocal Transformation
(3) square Transformation
(4) square Root Transformation

} Function Transformer

(i) Box - cox transformation → $n > 0$ shall not be Negative
(ii) Yeo - Johnson Transformation → $\boxed{0, -ve}$

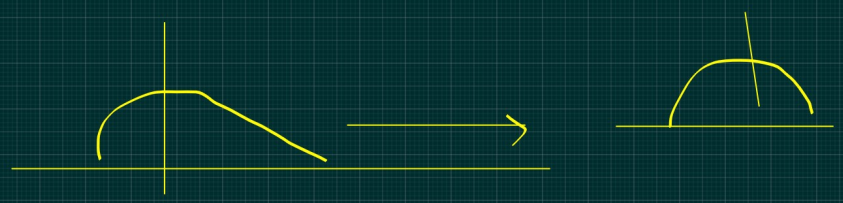
power Transformer

$0 + 1$
$\Rightarrow 1$ log1p

* Log Transformation

(1) Right skewed
(2) Should not be Negative Value

log T	Reciprocal	sq(n^2)	sqrt $\sqrt{n}$
$\log(n)$	$1/x$	x^2	$\sqrt{x}$



$(5\ 40)^{0.17} = T$
